

Database deploy at vps

Run the query to list users

```
SELECT user, host FROM mysql.user;
```

Step 1: Log in as root (for DB management)

```
sudo mysql
```

Step 2: Drop the old database (replace with actual name)

```
DROP DATABASE IF EXISTS medixpro_db;
```

Step 3: Create a fresh database

```
CREATE DATABASE medixpro_db;
```

Step 5: Grant privileges to medixpro_user (if not already done)

```
GRANT ALL PRIVILEGES ON medixpro_db.* TO 'medixpro_user'@'localhost';
```

```
FLUSH PRIVILEGES;
```

Step 6: Exit MySQL

```
EXIT;
```

Step 7: upload your database dump folder to the vps

```
scp -r "C:\Users\kales\Downloads\medixpro-dump" root@31.97.206.36:/root/
```

Step 8: SSH into Your VPS

```
ssh root@31.97.206.36
```

Step 9: Navigate to your dump folder

```
cd /root/medixpro-dump
```

Step 10: Import all SQL files in your db

```
for f in *.sql; do
```

```
    echo " 📁 Importing $f..."
```

```
    mysql medixpro_db < "$f"
```

```
done;
```

Step 11: Verify the Import

```
mysql -u medixpro_user -p medixpro_db -e "SHOW TABLES;"
```
