

Meeting Minutes (MoM)

Project: SPTech ERP

Date: 29 June 2026

Topic

Production Planning, Inventory, and Procurement Workflow

Discussion Points

1. Reviewed the complete Production Planning page created production plan entry.
2. Discussed the Material Request process from the Production Plan module.
3. Once a Production Plan is approved, the system should automatically generate a Material Request.
4. The Material Request will be sent to the Inventory department for stock verification.
5. Inventory will validate the required quantities against the available stock.
6. If sufficient stock is available, Inventory will release the material and create a Material Issue for Production.
7. If the required material is not available, the request will be forwarded to the Procurement department.
8. Procurement will initiate the purchasing process:
9. Create RFQ (Request for Quotation)
10. Receive Vendor Quotations
11. Finalize Vendor
12. Create Purchase Order (PO)
13. Receive Goods through GRN
14. Perform Incoming Quality Inspection (IQC)
15. Update Inventory Stock
16. After stock is updated, Inventory will issue the required material to Production.
17. Production can begin only after all required materials have been issued.
18. Discussed automatic status updates and notifications between Production, Inventory, and Procurement modules.
19. Confirmed that the complete workflow should be traceable from Production Plan to Material Issue.

Workflow

Production Plan
