

Work Report – Items Master & BOM Creation :

1. Items Master Enhancements

- Implemented **Unit Details column** (merged Qty, UOM, and Weight logic).
- Added **Stock Status indicator**:
 - Green → In Stock
 - Orange → Low Stock (with warning UI)
- Implemented **formula-based weight calculation** for:
 - Plate
 - Round
 - Pipe
- Added **density-based auto calculation** from Item Master.
- Supported **both weight-based (Kg)** and **quantity-based (Nos)** items.
- Improved item listing UI similar to ERP (stock + unit + status display).

2. BOM Creation Improvements

- Integrated **scrap % calculation** into final weight.
- Corrected **weight update issue (base vs final weight)**.
- Displayed **Unit Weight & Total Weight properly** for consumables.

3. Components & Consumables Handling

- Merged **Assemblies + Consumables/row material into single table** in Components section.
- Added **type-based display (Assembly / Consumable)**.
- Fixed issue where **consumables weight was not showing**.
- Ensured correct calculation for:
 - Kg-based consumables
 - Nos/Litre-based consumables

4. Dynamic Form Logic

- Implemented conditional UI:
 - (Consumable/Raw + Kg) → show extended form
 - (Consumable/Raw + Nos) → hide extended form
 - Assembly/FG → no weight calculation
- Added **dimension-based inputs (L, W, T, Dia, etc.)** for calculation.

6. UI/UX Improvements

- Cleaned table structure:

- Added **Unit Details and stock column**
 - Adjusted **Weight / Qty display in single column**
- Improved consistency between:
 - Items Master
 - BOM Creation

Status:

Core ERP flow for **Items Master + BOM calculation + stock display** is implemented and working correctly with dynamic logic and accurate calculations.
